

*Anti-skid and highly durable:*

## **Silikal floor in a car wash installation**

**Expect more from your floor.**

## “Carwash” on a sturdy basis

The new “Carwash” installation in Woerden, Holland chose bright red reactive resin flooring from Silikal. And for a good reason: The new floor is a real eye-catcher and very resistant.

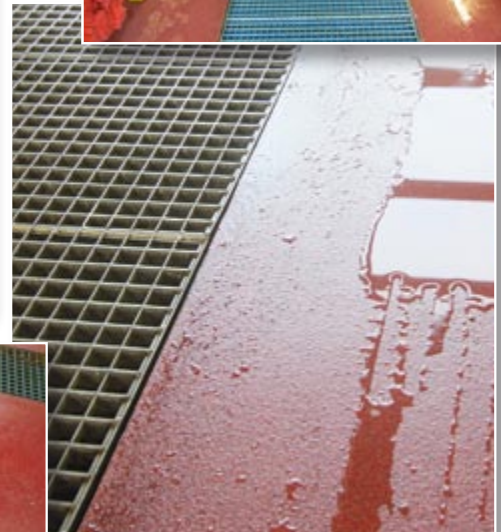

Resistant against oils and greases, many acids and most important against the alkaline solutions used here to clean the cars, the MMA (Methylmethacrylate)-coating offers a high degree of chemical resistance.

Mechanical stress caused by the vehicles and equipment are also no problem

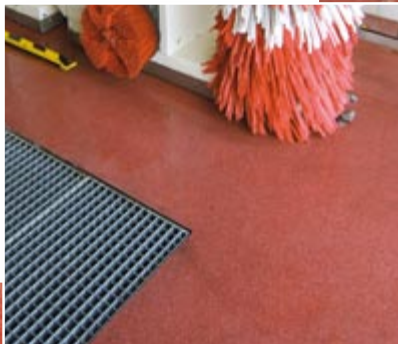

for the highly resistant flooring. The flooring is anti-skid both inside the wash installation as well as on the surface for pre-treating the vehicles. The added colour quartz provides the necessary stability.

Silikal-floorings are also quickly laid. Already two hours after laying they are completely hardened and can be fully exposed to loads.

Proven in the field  
For over 55 years  
On many million m<sup>2</sup>

*Skillfully applied by qualified installers and the new floor is fully cured and ready for action within two hours. A perfect way to keep your operation running wide open.*

**Expect more from your floor.**
